Software Options for the Models 2700, 2701 and 2750 Switch/Data Acquisition Systems

Packing List

Included with your product is the latest CD release of the "Integra Series Instrument ExceLINX-1A" as described below. Check the website for possible updates. Installing this start-up software also installs the IVI driver, which can be used separately if desired. (For full documentation and examples, download the driver files from the website).

Free software, available for download at www.keithley.com on the Models 2700, 2701 or 2750 web pages:

- **Driver (IVI and VISA based) for use with programming languages (included on the CD)**

    IVI (Interchangeable Virtual Instruments) and VISA (Virtual Instrument Software Architecture) provide a common foundation for application development across multiple communication buses and multiple instrument vendors. This software driver supports many application development environments under Windows such as Visual Basic, C/C++, LabVIEW, LabWindows CVI, and TestPoint. Numerous examples and on-line help utilities are provided to help the programmer build custom applications. Support is included for the GPIB or the RS-232 interfaces of the Models 2700, 2701 and 2750.

- **ExceLINX-1A (included on the CD)**

    This is a Microsoft® Excel add-in utility for the 2700, 2701 and 2750 systems. Within minutes of installing ExceLINX-1A on a PC, users can acquire data dynamically within Excel, and then employ the familiar Excel graphics, charting, and analysis capabilities. No programming is required to use ExceLINX – a few mouse clicks are all it takes to configure channels, set parameters, triggers, and scan lists, etc. Check www.keithley.com or call 1-888-KEITHLEY (534-8453) for more information on ExceLINX-1A.
